princemoradiya113@gmail.com

Skills

Full stack software developer with 4+ years of expertise in front-end and back-end development, experienced in leading cross-functional teams.

Technical skills:

- **Frontend -** Javascript, Typescript, React js, Nextjs, Redux(thunk, toolkit)
- **Backend -** Node.js, Express.js, Typescript, NestJS
- **Database** - MongoDB
- **Project Management** - Jira, Trello, Slack

Software Engineer (Full-Stack Developer)

- Built responsive and dynamic user interfaces using **React**, improving usability and accessibility while adhering to modern design principles.
- Developed and maintained **RESTful APIs** with **Node.js**, ensuring efficient data flow and seamless integration between front-end and back-end systems.
- Identified and resolved critical bugs, optimized codebases, and implemented performance improvements, resulting in significantly reduced load times and enhanced application efficiency.
- Worked closely with cross-functional teams to deliver features within deadlines, aligning with project objectives and ensuring successful deployments.

Projects

Restaurant Management

It's a website for users who are willing to eat in a restaurant by just ordering items from a non-physical menu and can also make payment after completion of everything. Also, I have created the Admin side(restaurant) who owns the restaurant and they can upload new dishes in their menu, and edit or delete them

Technologies: React js, Next js, Redux, Tailwind CSS, NodeJs, MongoDB

Kelmarc Group

IIt's a website for Auditing, Consulting, and Learning for an organization or a single user. In Auditing includes assurance management systems and regulatory compliance auditing services and regulatory compliance assurance audit services, Consulting includes ISO certification and regulatory consulting services and Learning includes training for executive management, practitioners, and auditors in ISO Certification Management Systems, Risk & Regulatory Compliance, and Culture development.

Technologies: Angular js, NodeJs, MongoDB

Rox-Games

Rox-Games is a betting platform for the horse race where you can bet on different types of events and also have you can rent a horse and purchase horse features you can rent your horse for the race event and also buy your own horse for the race. It also uses a crypto wallet for the transaction. It will use a meta mask and torus. for that.

Technologies: Next JS, CSS, web3modal, web3auth, NodeJs, MongoDB

Dexo-NFT Marketplace

Dexo is a unique platform where you can make new NFT with its NFT make feature and also purchase NFT of others. This platform provides an environment for trading NFT using the crypto wallet.

Technologies: Next JS, CSS, web3modal, web3auth, NodeJs, MongoDB

Ring-Funnels

The purpose of this website is Insurance Solicitation, and we are not connected or endorsed with the Federal Medicare Program or any other Government entity. We help Medicare Beneficiaries compare their Medicare Insurance options with a Licensed Insurance Agent.

Technologies: Angular js, Redux, Bootstrap, and MUI components, NodeJs, MongoDB, and Cloudinary

Musicart

MusicArt is a unique new NFT platform with its sole focus on celebrating and promoting music-based art and imagery. This platform provides an environment for musicians to trade their visual art, as opposed to seeing their work lost in a sea of NFTs in unrelated genres on other platforms.

Technologies: Next JS, Redux, Tailwind Css, MUI components, Antd components, Nodes, Fastify, Firebase, Firestore, Firebase Functions
